

## **METHOD AND APPARATUS FOR BACKGROUND ADJUSTMENT IN COLOR REPRODUCTION DEVICES**

5

### **ABSTRACT**

A method for background adjustment. A background lightness level in an original image is estimated. Pixels are then converted to a luminance-chrominance color space.

10 Pixels have lightness levels equal to the background lightness level are mapped to a value corresponding to white as background pixels. Chroma values for the background pixels are compared to a threshold ad adjusted as needed, either by adjusting the lightness value or by removing the chrominance values. The luminance-chrominance data is then converted to output space.
